

Retro_Notes

Sprint 2 Retrospective

What went well:

- The toggle feature was implemented smoothly and worked as expected.
- UI improvements helped the website become more user-friendly, especially on mobile.
- Team communication improved due to clearer ClickUp task assignments.

What didn't go well:

- Not all tasks were completed on time due to external deadlines.
- We still had some confusion about how to link tasks to milestones.
- Testing on older browsers was skipped due to time constraints.

Lessons Learned / Action Items:

- Start planning deployment and testing earlier.
- Improve estimation of effort for front-end tasks.
- Make sure all members are familiar with the task management process.
