

Sprint_Goal_Commitment

Sprint Goal

The goal of Sprint 1 was to build the first functional version of the Ask-MEU website using HTML, CSS, and JavaScript. This version was intended to simulate AI behavior using locally stored questions and answers, with a simple and responsive user interface.

Sprint Commitment

We committed to:

- Designing and implementing a basic user interface that matches the planned structure.
- Implementing a local Q&A system using JavaScript.
- Organizing the question categories visually for easier navigation.
- Hosting the prototype on Vercel or GitHub Pages.

By the end of the sprint, we successfully delivered the website with these core features in place. Backend or dynamic AI generation is planned for future sprints.
