Sprint_Goal_Commitment.pdf

Sprint Goal
The goal of Sprint 2 was to enhance the functionality and usability of the Ask-MEU prototype. This included implementing the question toggle feature, improving the UI experience, and preparing the system for future AI backend integration.

Sprint Commitment
We committed to:

- Adding a toggle function that allows users to show/hide answers.
- Improving the category layout to support mobile responsiveness.
- Reviewing and cleaning the front-end code for maintainability.
- Testing the site across different devices and browsers.

By the end of Sprint 2, the toggle feature was implemented and tested, and several interface adjustments were completed. The system is now ready for back-end integration in future phases.
